

Precision Rifle Series (PRS) Training

July 19, 2025. Saturday – One-day course

8:00am – 4:00pm

Colorado Rifle Club

Address: 76099 E 96th Ave Byers, CO 80103

Practical: Long Distance Precision Rifle Range (LDPR)

Limited to 10 participants. Cost \$250

PRS (Precision Rifle Series) style shooting is a dynamic and challenging type of long-range rifle competition that involves hitting steel targets from varying distances and unconventional positions, often under a time limit. It emphasizes accuracy, problem-solving and adaptability.

Curious about trying PRS shooting or improving your skills? This course is ideal for you, offering a great opportunity to enhance your marksmanship and confidence, even if you have no prior match experience.

Disclaimer: not sanctioned by or affiliated with the Precision Rifle Series.

What the training is:

The day begins with match preparation and safety. We'll cover what to expect at a PRS match, including rules, stages and how to choose your rifle, caliber and gear. You'll also learn how to practice at home and participate in an interactive Q&A session. A variety of commonly used gear, such as tripods, bipods and shooting bags, will be available for you to explore and use. Additionally, you'll have the chance to view and handle PRS-specific rifles.

We'll move from match preparation to hands-on practice and live shooting. We'll start by confirming your 100-yard zero and checking your dope and velocity. Chronographs will be provided, if needed. You'll go through practice stages that mimic real match conditions. We'll discuss time and gear management, navigating different shooting positions and common mistakes to avoid.

Participants will have the opportunity to run through multiple live fire stages on the clock, where they will receive coaching and feedback. There will be additional stages where participants will test their newly acquired skills.

What the training is not:

This match preparation course is not designed for beginners or as an introductory rifle class. Participants should already have a solid foundation in shooting skills, as these will not be covered in this session. Shooters must be able to safely handle their firearms at all times and should be familiar with the operation of their rifle and scope, as well as have precise D.O.P.E. (scope elevation adjustments) for distances up to at least 800 yards. This is not the occasion to bring an untested rifle or a newly mounted scope that requires extensive time to zero, as the schedule is tight and such activities would detract from the planned training.

Physical Difficulty: Moderate, this course includes movement on barricades and emphasizes positional shooting from unfamiliar positions. This is not a prone or bench shooting course. Accommodations can always be made for physical limitations. Please contact to discuss any possible limitations or concerns.

General range requirements:

Maximum muzzle velocity for all rifles is 3200 fps per CRC range rules. No steel core or armor piercing ammo. No pistol open carry or concealed carry. Eye and ear protection are required. CRC is a wildlife refuge; therefore, all wildlife is protected. Absolutely no use of drugs or alcohol.

Essential gear list for training day:

- Safe functioning, centerfire rifle, .30 caliber or below, with recommended accuracy of 1 MOA or better (1 inch group at 100 yards). Detachable box magazine(s) recommended. Participants will be shooting up to 10 rounds per stage. Bring 120 rounds of quality/match ammo for the day and any additional required for zero confirmation and chronograph.
- Riflescope with elevation and windage turrets capable of dialing or a detailed reticle capable of holdover to a minimum of 800 yards.
- Notebook, pens and pencils
- Ballistic Solver. This may be an app, kestrel, range finder, LRF binos, and can provide you the correct information for long-range shots.
- A method to access and record your D.O.P.E. A wrist coach or rifle mounted dope card are good options. Extras will be available for use, if needed.
- Chamber flag/ empty chamber indicators are required at all times off of the firing line. Chamber flags will be provided.
- Support equipment: Bipod, Tripod, shooting bag/ support bag/ rear bag. While these are not required to participate, they are widely considered essential gear.
- Durable closed toe shoes and long pants.
- **Food and drink: please bring your lunch, snacks and drinks.**

*There will be a selection of demo gear available for participants to test and share: tripods, bipods, shooting bags in a variety of sizes and weights, positional pillows, etc.
